

BURUNDI

NATIONAL AIDS COUNCIL (CNLS)

**PERMANENT EXECUTIVE
SECRETARIAT (SEP)**

**Epidemic situation and national
response for prevention in
Burundi**

PRESENTED BY:

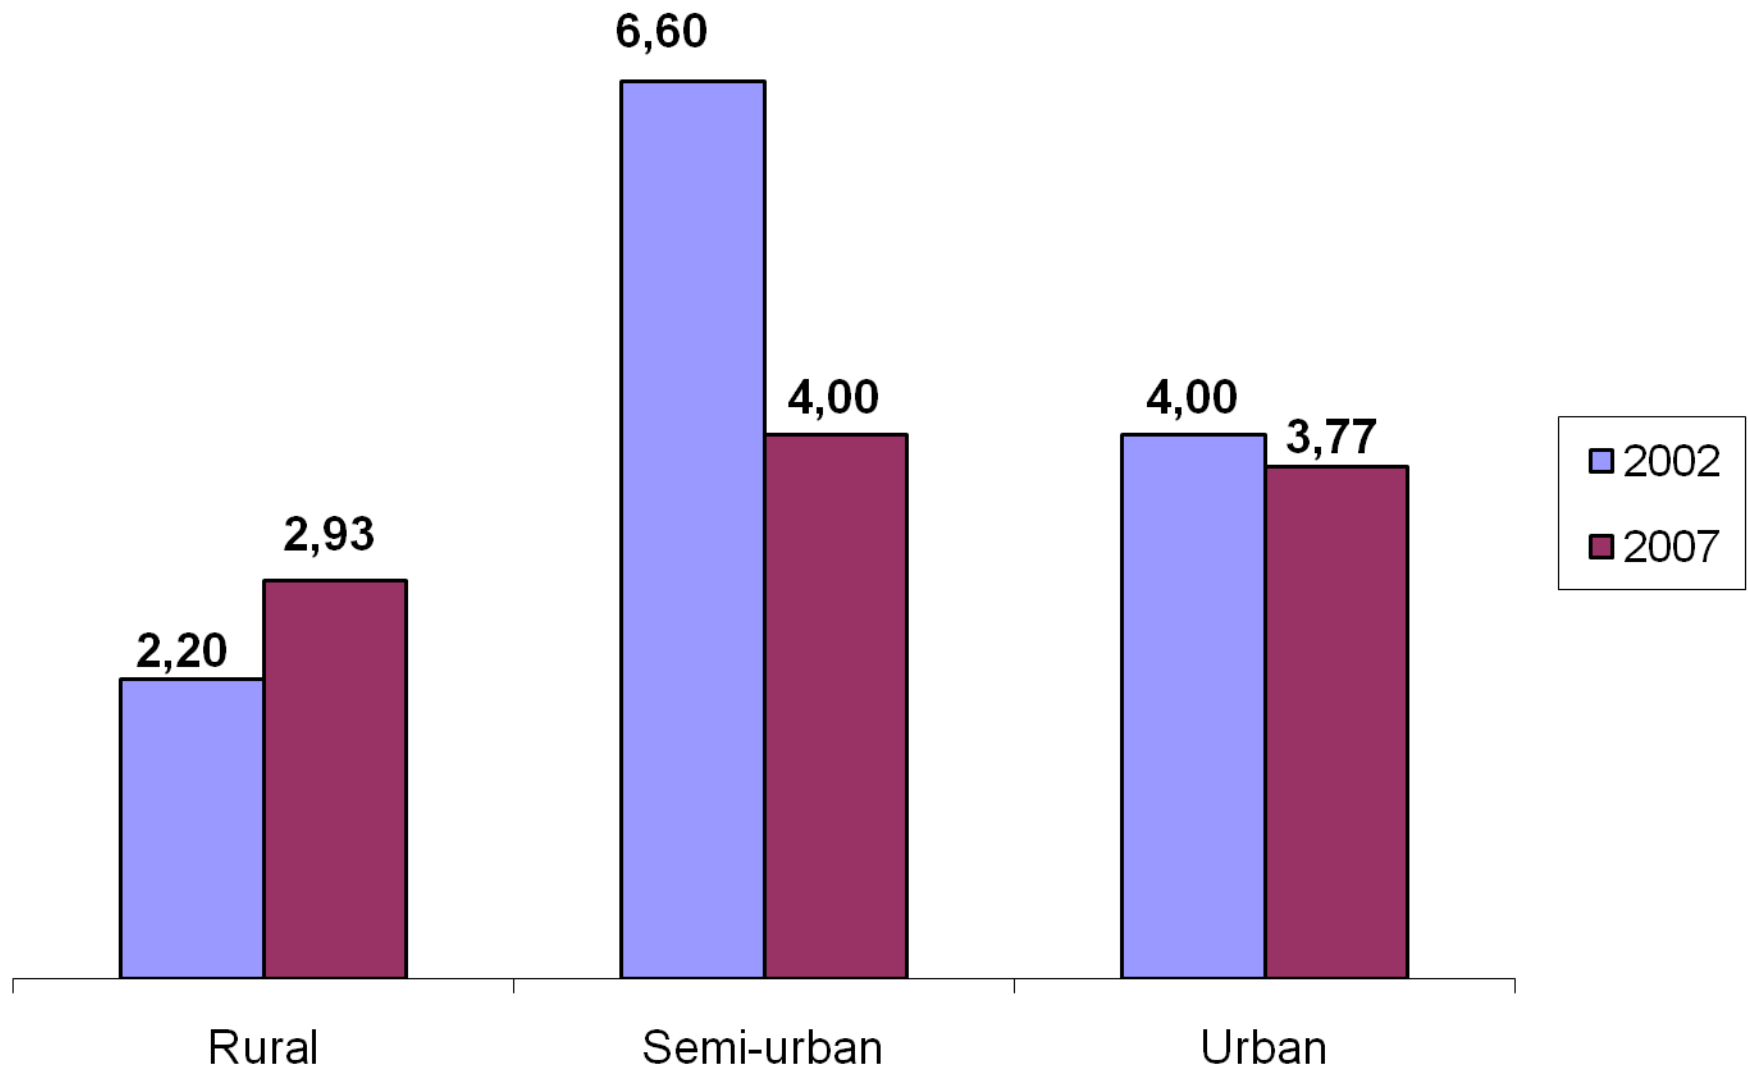

Dr RIRANGIRA Jean

Permanent Executive Secretary, SEP/CNLS

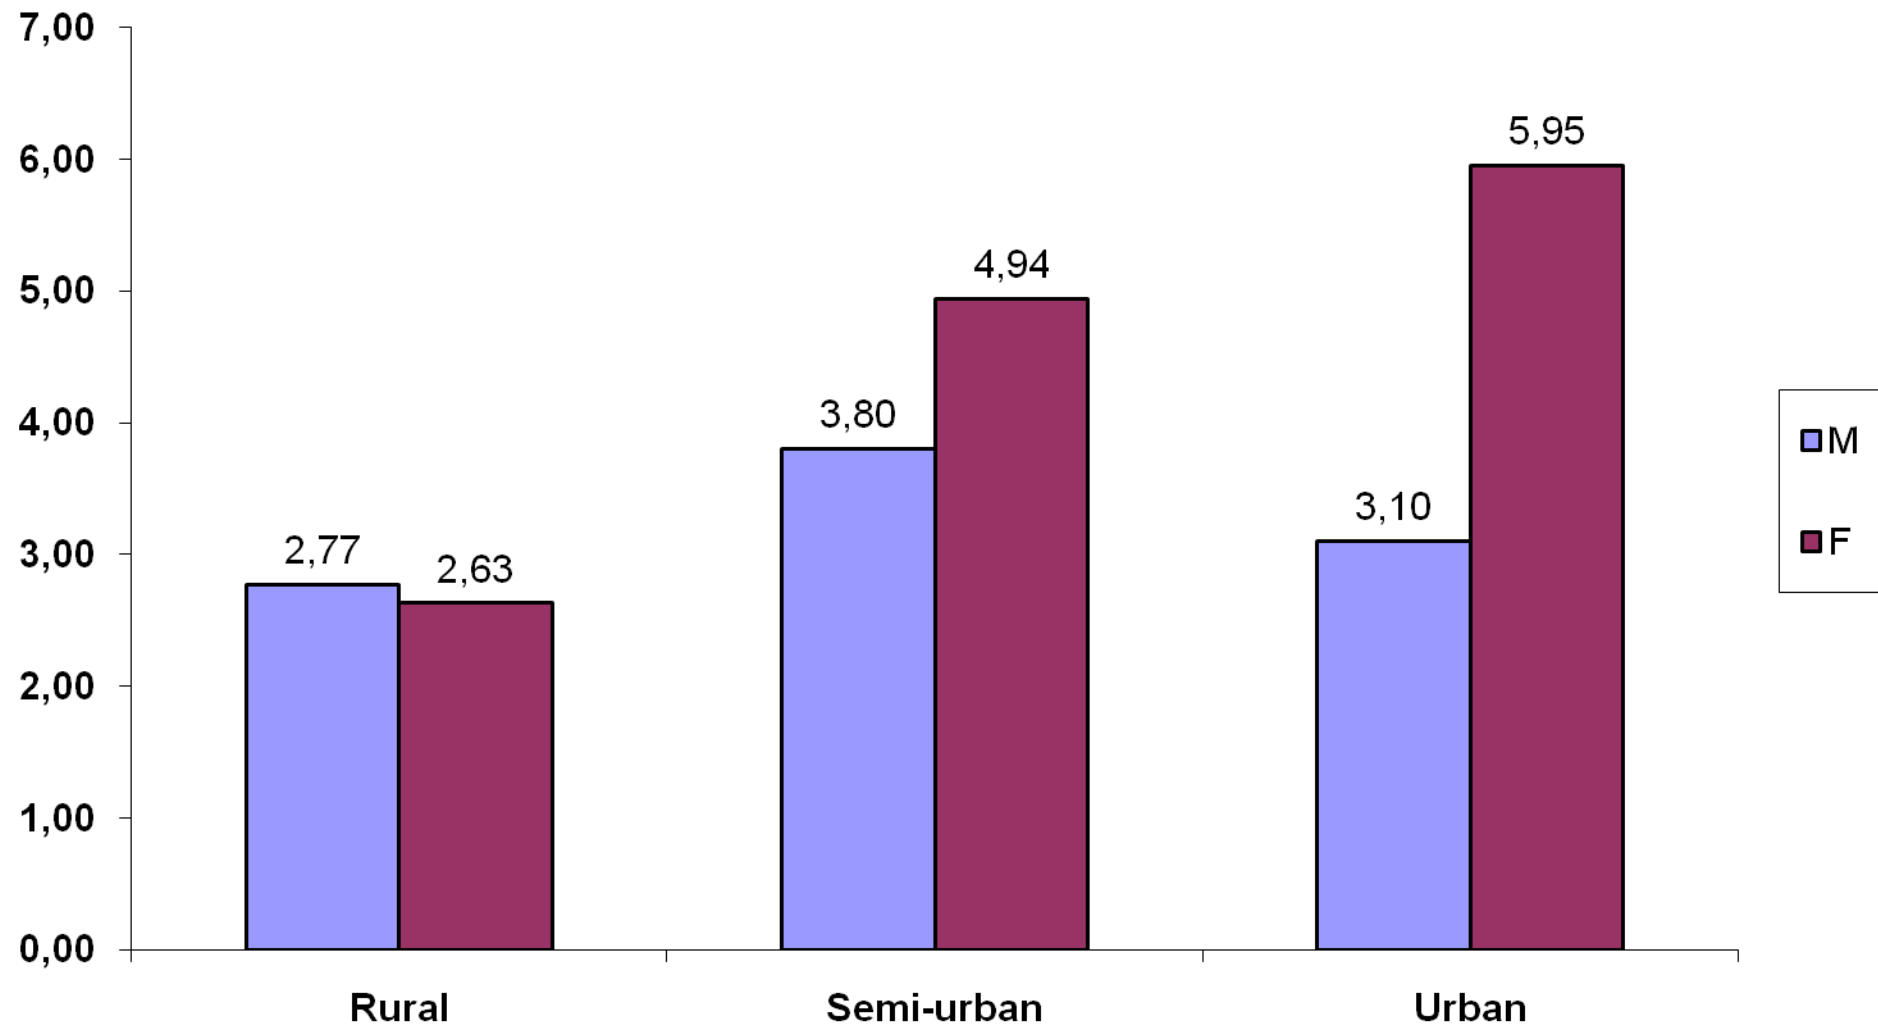

Presentation plan

- HIV prevalence and BSS data
- National response for prevention
- Prevention budget
- Key issues

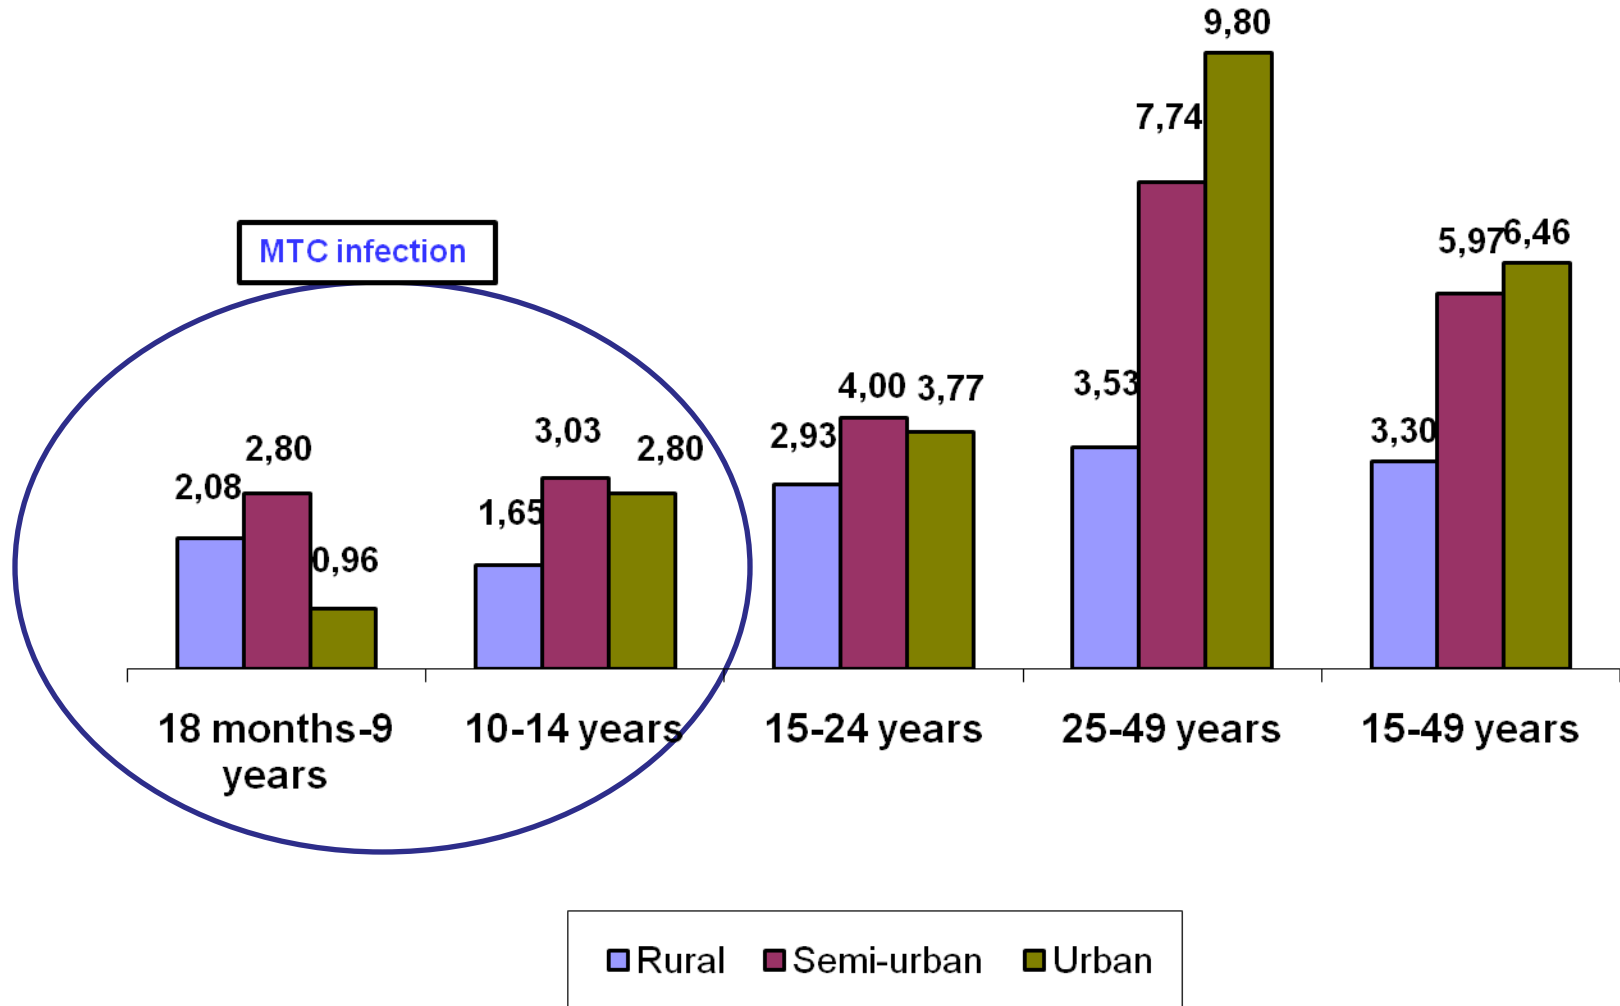

HIV prevalence rate in 2002 and 2007 among young women and men aged 15-24 years

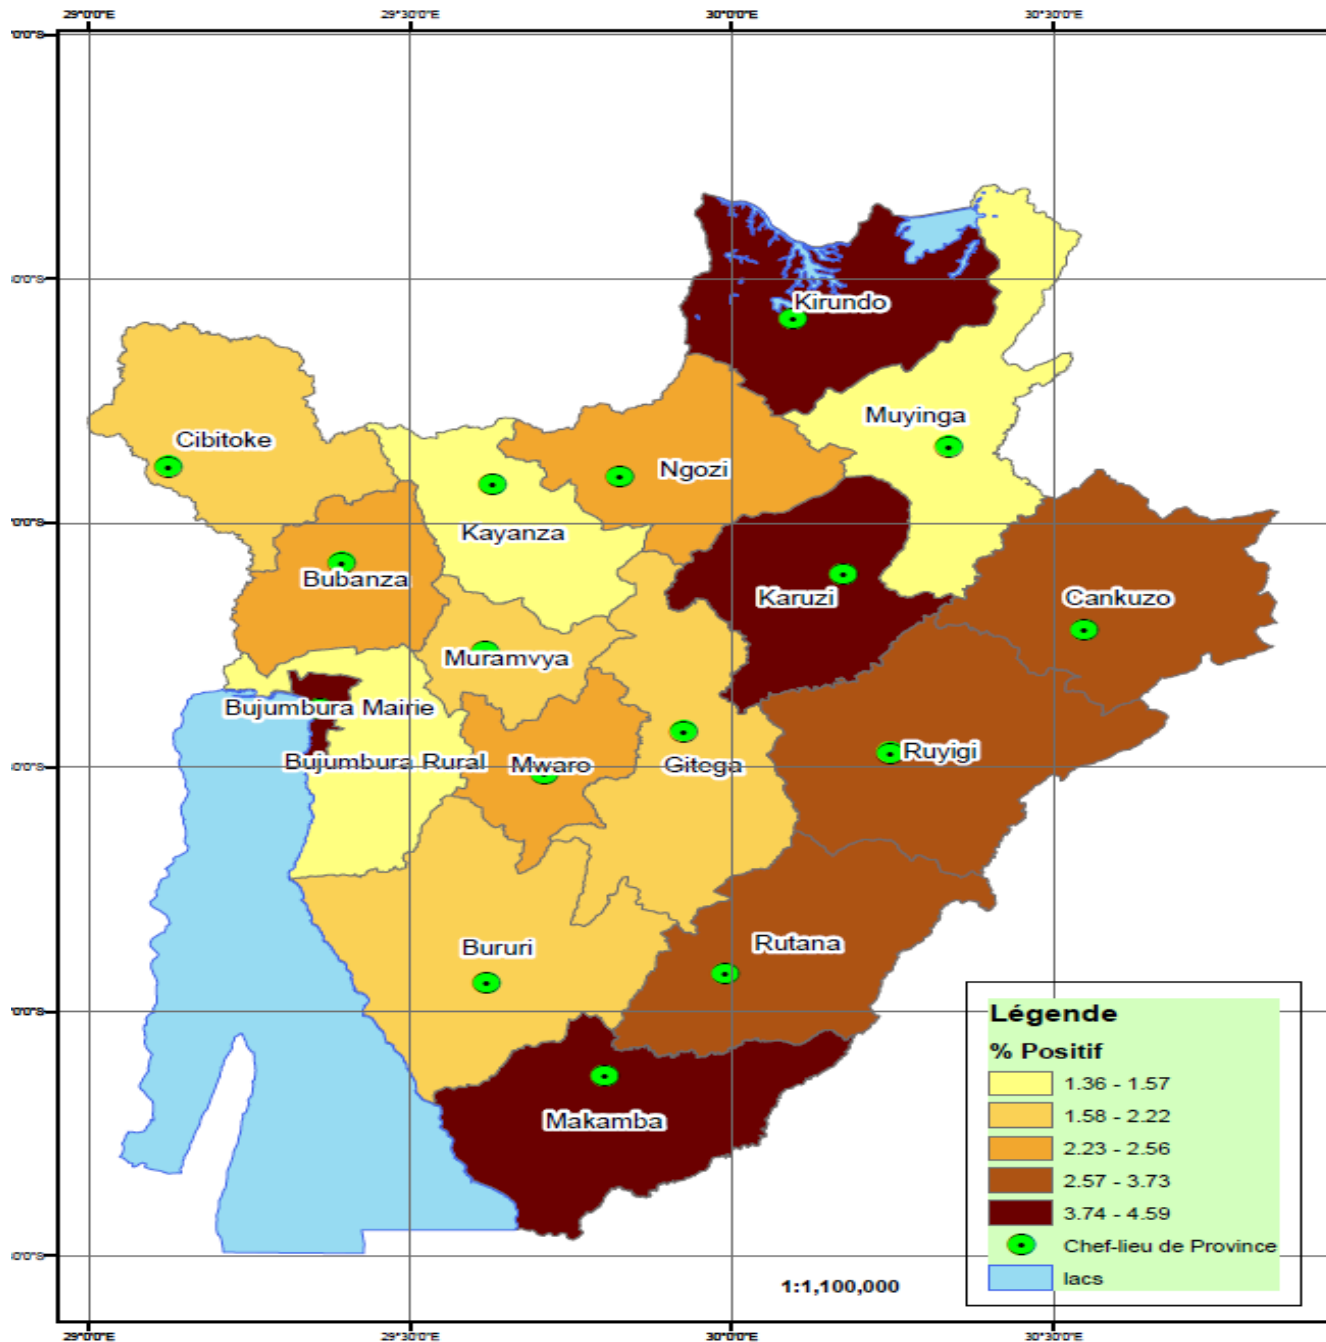

HIV prevalence rate by sex in 2007 among general population (18 months and more)

HIV prevalence rate by age in 2007 among general population (18 months and more)

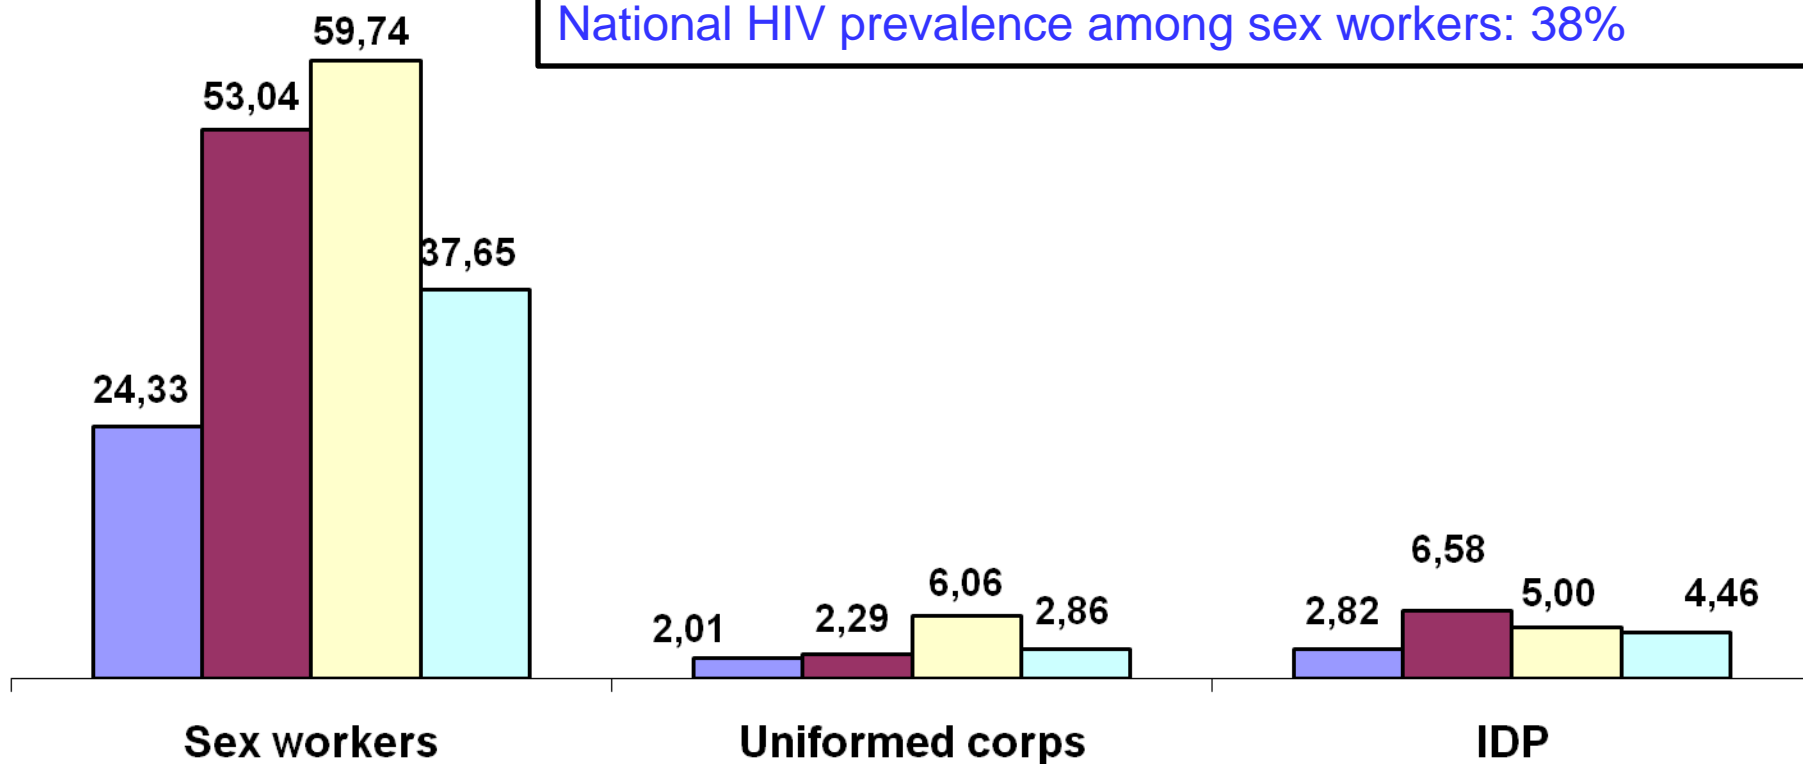

SEROPREVALENCE DU VIH SIDA PAR PROVINCE

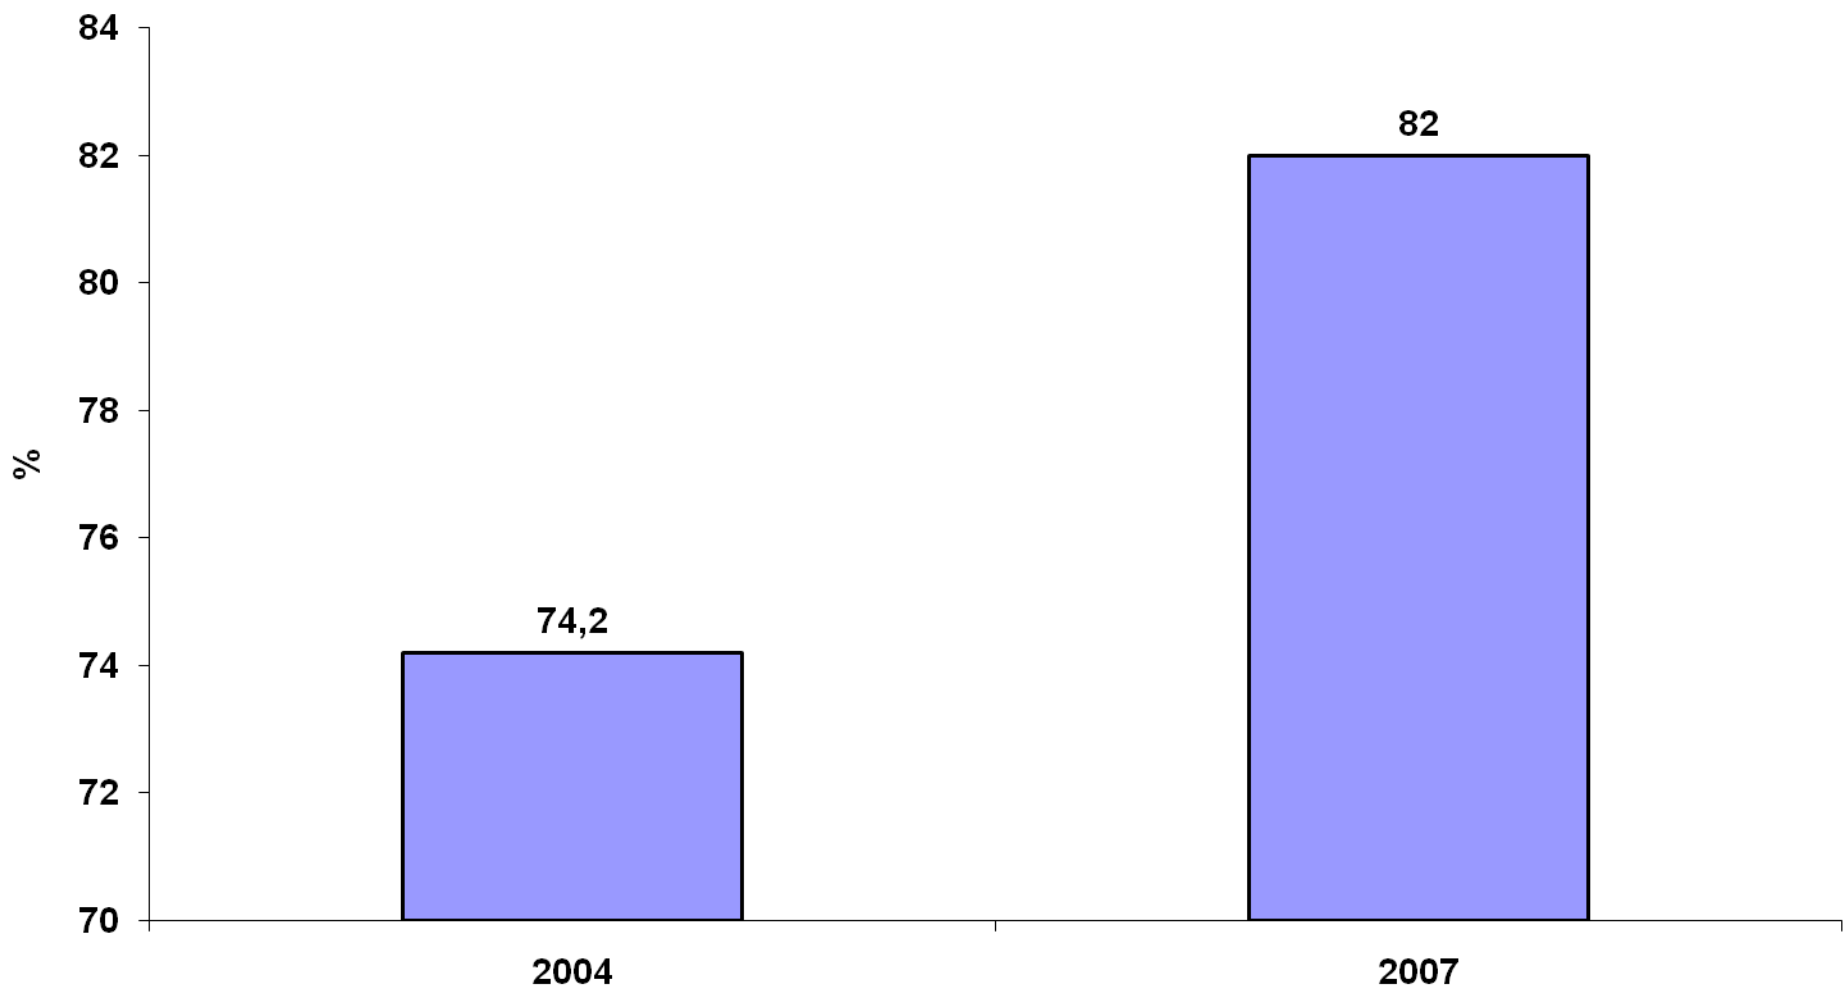

Epidemiologic situation among vulnerable and most at risk populations (HIV prevalence rate)

National HIV prevalence among IDP: 4,46%
National HIV prevalence among uniformed corps: 2,86%
National HIV prevalence among sex workers: 38%

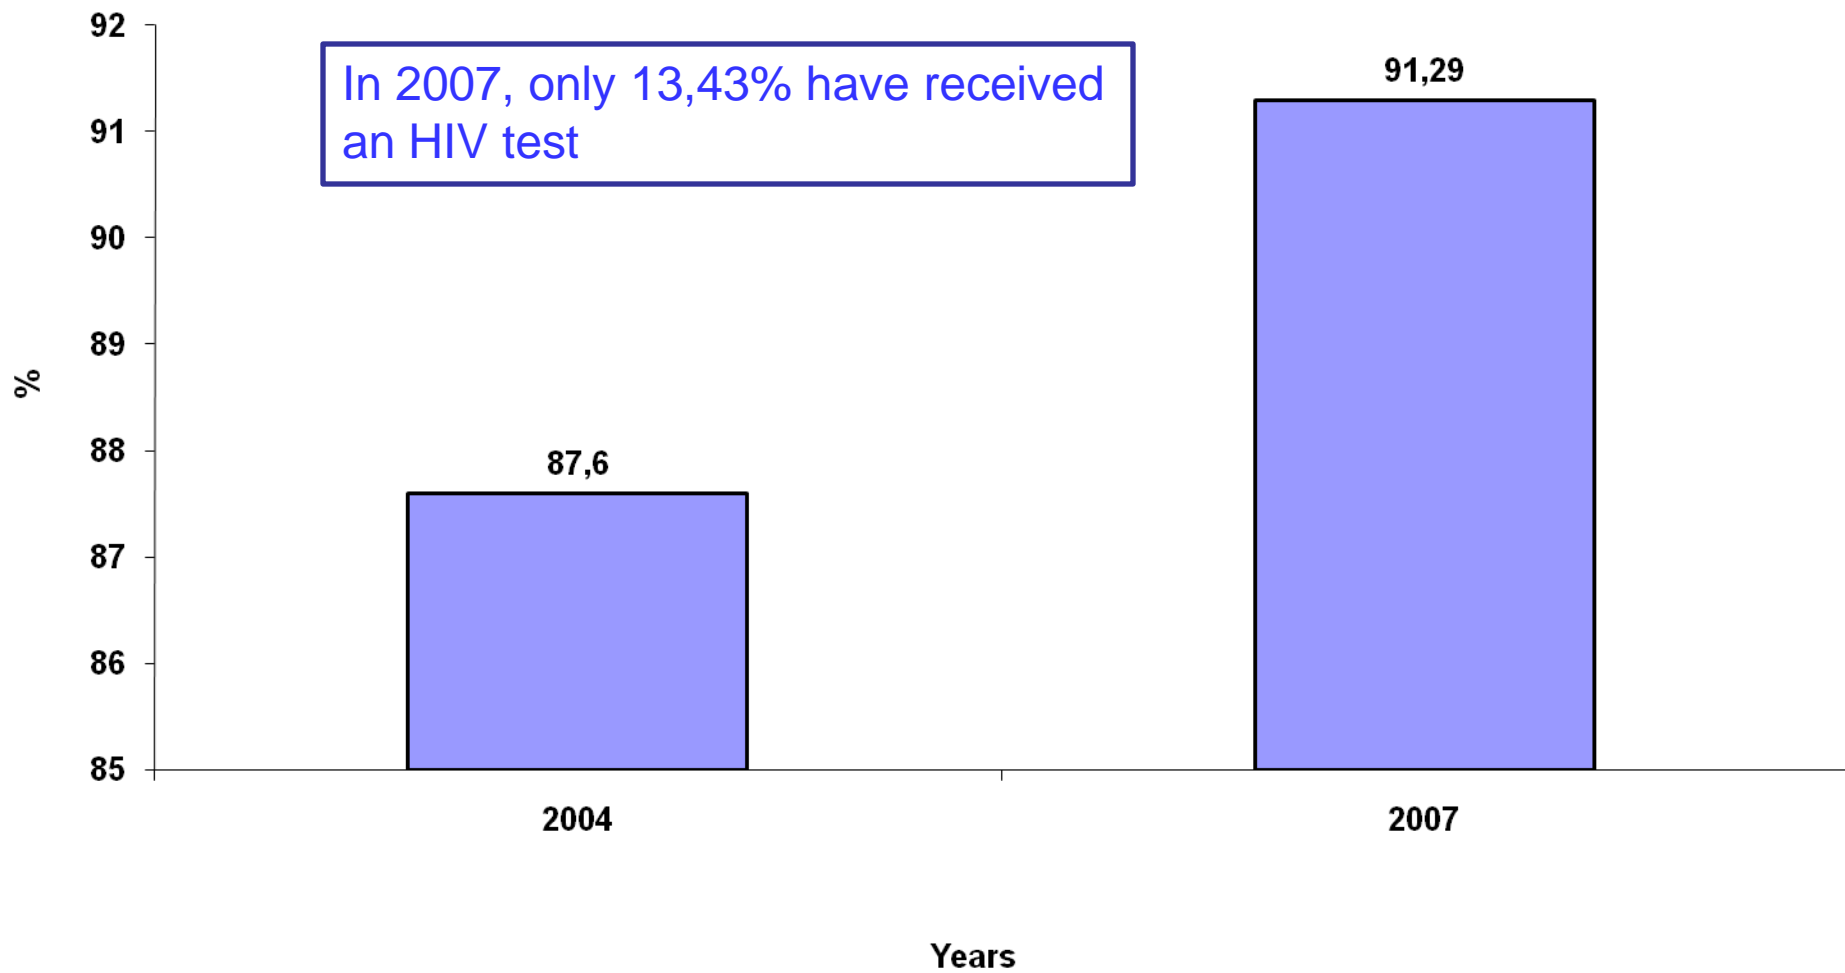

■ 15-24 years ■ 25-34 years ■ 35-49 years ■ 15-49 years

% of sex workers reporting the use of a condom with their most recent client

% of young people (15-24 ans) who received an HIV test in the last 12 months and who know their results

National response for prevention

- **Sensitizing (mass media, peer education) of the general population and among vulnerable and most at risk groups (youth in schools and out of schools, sex workers, Internal Displaced Population (IDP), uniformed corps, widows, etc.),**
- **Income generating activities for vulnerable and most at risk groups**

National response for prevention (2003-2008)

- **Condom distribution (49,5 millions of condom: average of 8 millions per year); population aged 15-49 years: around 4,5 millions**
- **VCT program: 760.638 persons have received HIV test (~10% of Burundi population)**

National response for prevention (2003-2008)

- **STI prevention and treatment: ~20.000 cases diagnosed and treated**
- **Blood transfusion: low HIV prevalence among blood donors: 0,3%**
- **PMTCT: low coverage of HIV positive pregnant women: 7%, PCR available,**

Prevention activities budget (2002-2007)

- Global program expenditures: 67 millions USD
- Prevention program expenditures: 23 millions USD (37%)

Key issues and opportunities

- **Lack of baseline data and epidemiologic situation analysis of most at risk population (MSM, Drug users, homeless children, etc.)**
- **Scaling up the PMTCT program with a strong link with Reproductive Health program,**
- **Promote male circumcision, as a prevention method**

Key issues and opportunities

- **Lack of coordination among implementers involved in prevention program and low alignment of Technical and Financial Partners to the national strategic framework (institutional arrangements),**
- **Opportunity of R8 and WB project to conduct a situation analysis targeting most at risk population for a cost-effectiveness funding of prevention program**

Thank you
